BUILDTECH SOLUTIONS DEBUTS AT 2007 INTERNATIONAL BUILDERS' SHOW Leading-Edge Project Management Software Provides Complete Home Builder's Office

Orlando, FLA, Feb. 6, 2007 – BuildTech Solutions, L.L.C., will launch the latest in leading-edge project management technology for developers and home builders at the 2007 International Home Builders' Show (Booth #S10651).

BuildTech Solutions, L.L.C., was developed through the collaboration of seasoned experts and leaders in both the home building and information systems industries. After researching numerous project management software programs for his own business, Anthony LoDuca, co-owner of Lotus Group Inc. in Southgate, Michigan, identified a void in existing system applications. Colleagues and associates introduced him to Greg Nigosian, owner of Adviso Inc., a leading IT consultant group that specializes in creating custom database applications for Fortune 500 companies. After three years of extensive research and development, they created BuildTech Solutions, L.L.C.

"I had the expertise and hands-on knowledge of the building industry and could identify exactly what was missing in current systems on the market," said Anthony LoDuca, co-owner of BuildTech Solutions, L.L.C. "Greg had been a seasoned IT consultant for years and the combination of a practical and technological vision created the perfect partnership".

The BuildTech software, integrated into a company's daily operations, provides a host of advantages to manage the home building process. Integrated with a PC or PDA and an internet connection, updates are automatic and timely. Using a centralized data source, cross-functional operations shares information in real-time.

- more -

The system encompasses various modules such as: Developer Budget Module which tracks stages of development from land acquisition through lot sale; Sales Management, with a built-in CRM tool to track sales leads, prospects, and purchase agreements; Pro Construction for real-time scheduling, vendor material management, and tracking stages of the building progress. BuildTech also provides a complete integrated office management module for accounting, warranty management and closing information, as well as employee time clocks and time management tools, inter-company memos, and a user-audit trail to record time-stamped information.

"This system is web-based and hosted from a secure server that uses firewalls and other advanced technologies to ensure a protected web environment," said Greg Nigosian, co-owner of BuildTech Solutions, L.L.C. "There are no third party utilities or software to buy, no CD's to install, or costs to maintain the software on multiple PC's. This is a very user-friendly, comprehensive system that provides a centralized, company-wide solution."

Ron Wilson, national sales manager for BuildTech Solutions, says the advantages to the system are endless: "This system allows streamlined productivity and communication; improves accuracy by automating information available to the entire staff; and can be tailored to meet the unique dynamics and operational needs of our customers."

BuildTech Solutions, L.L.C. is headquartered in Dearborn, Michigan and provides software solutions to home builders and developers throughout North America. BuildTech is committed to providing the construction and development industry with solutions that are timeline driven, designed around real world experiences, and are continually improved through customer input.

BuildTech Solutions, L.L.C. is exhibiting at the International Home Builders' Show in Orlando, FL, February 7 – 10, 2007 in the South Hall at Booth # S10651.
