BUILDTECH SOLUTIONS HAS SUCCESSFUL LAUNCH AT THE 2007 INTERNATIONAL BUILDERS' SHOW

Dearborn, MI, Feb. 22, 2007 – BuildTech Solutions, L.L.C., officially launched at the 2007 International Home Builders' Show in Orlando, Florida on February 7, 2007, received an overwhelming response to the latest technological advances in project management software.

Developed through the collaboration of experts in both the home building and information systems industries, BuildTech Solutions found an enthusiastic and receptive market of small-to-mid-size builders exploring the option of integrating new technology into their current operations.

"This was our first experience as an exhibitor at the IBS Expo," said Anthony LoDuca, co-owner of BuildTech Solutions. "We knew the competition for attention from builders and developers were going to be a challenge, but the response and interest from the industry was an overwhelming success. It exceeded our expectations and we're well on our way to creating real change in the industry."

Using a centralized, web-based data source, BuildTech Solutions allows builders to plan, track, monitor, and follow-up on every detail of a project from start to finish. . The system uses a centralized data source, allowing cross-functional operations to share information in real-time, from a secure server using firewalls and technologies to ensure a protected web environment. The software is a user-friendly, comprehensive system that provides a centralized, company-wide solution.

"The research and market data we've collected over the last three years was validated by the builders and developers we interfaced with at the show," said Greg Nigosian, co-owner of BuildTech Systems. "The primary concern and challenge builders face is, although there are several quality systems on the market supporting various business needs, none of them are all inclusive. Builders are spending exorbitant amounts of money by having to add new features and updates to meet their overall business needs."

The BuildTech Solutions program does not require additional CD's, software packages, or third party utilities. When integrated with a PC or PDA and internet connection, updates are automatic and timely. The system modules include important items like developer budget modules, which track stages of development from land acquisition through lot sale; sales management modules, with a built-in CRM tool to track sales leads, prospects and purchase agreements; and pro construction modules for real-time scheduling, vendor material management, and tracking stages of the building progress.

The BuildTech Solution also includes a complete integrated office management module for accounting, warranty management and closing information, as well as employee time clocks and time management tools, inter-company memos, and a user-audit trail to record time-stamped information.

BuildTech Solutions, L.L.C. is headquartered in Dearborn, Michigan and provides software solutions to home builders and developers throughout North America. BuildTech is committed to providing the construction and development industry with solutions that are timeline driven, designed around real world experiences, and are continually improved through customer input.
